Sound-sound will prob include a short theme that I may create on my guitar
but is still to be determined. Also, I might include one or two sound
FX.

The photo that I created above is my movie bumper prototype. I will create
this within Adobe Aftereffects along with the animation part of it. A more
thorough rundown is shown on my storyboard but my goal is to have a
5-7 second bumper that starts with just the eyeballs and the background
color. Each half of the skull will come in from either side and snap together
around the eyeball. The text then will drop in from above and below. All this
occurs to some kind of groovy soundtrack that I havnt fully formulated yet.
