

## Artist Brief

The objective of this project was to do a rotoscope of a video scene and make it into an animation. My goal was to take a copy of my one of my son's solo's and do the rotoscope. I was able to take a part of the video in Paremaire Pro and cut it down to about 1 min. I found it easy to cut it in Premiere Pro but once I put it in After Effect I found that it was going to be to much for me to rotoscope. I then had the idea to have a cute dog that was trying to open a street library box. Although it was a cute it wasn't what I wanted. So I went back to the drawing board. I then found a dancing grandma and since my main idea was a dance rotoscope I decided to go for it. It is how I would like to be when I am older. I found a video on Pexels and I looked through a lot of different backgrounds. I settled on one that was a very colorful and fit the image of the grandma. I used a clean color filter to make the color not so bright. When I tried to take the rendered asset into Photoshop I was able to get the movie clip to work correctly. One of the problems that I had was that my computer was able to handle all the ram that this project required so I had to be patient with the process. This is something that I would like to explore more and I would like to rotoscope my son's dance.
